

Used Parts for Forklifts

Used Parts for Forklifts - Sooner or later, lift truck parts would wear and must be replaced. Purchasing new parts can become a costly endeavor so another idea is to obtain used lift truck components. This could save a lot of money in the end. It is a great idea to acquire used lift truck components that have been remanufactured. These parts would guarantee that you are getting parts which would work for a long time and be productive.

Remanufacturing worn out or broken parts is a cheaper way overall compared to rebuilding. With rebuilding parts, only the parts which are worn out or broken get changed, which means that other wearable components may break down soon after acquisition.

Remanufactured components are cleaned after being taken apart and have the unusable parts changed. This technique can offer the best guarantee for used components. All wearable components are replaced regardless of age or wear which is one more reason why reproduced parts in general run so much better. Whatever component within the part is new and this provides far longer life to the used part. Based on the forklift components that are being redone, the cleaning process and the entire remanufacturing process would differ.

After complete disassembly, the engines are oven cleaned. Various parts of the engine like spark plugs, pistons, rings, filters, valves, and valve springs can be replaced during the remanufacture process. The engines are hot tested after reassembly to ensure that there are no leaks, no noises, no oil pressure problems or any vacuum.

Transmissions are another thing that is oven cleaned after being disassembled. The transmission is then washed. A thorough inspection is performed in order to check for any cracks. Seals, bearings and bushings are all replaced. Typically, the replacement parts utilized on transmission parts meet OEM specifications.

Some parts such as torque converters, the alternator, the water pump, the starter and steer axles can acquire longer serviceability after being reproduced and having all wearable parts replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card could even be remanufactured with replacing all aged and worn out components. Unlike different lift truck components the control card could only have the worn and aged components replaced.

Parts which are remanufactured have to be thoroughly examined upon reassembly to ensure they are in good condition previous to being sold. When obtaining these parts, it is a good idea to be sure that they have undergone all of the proper testing and inspections. On certain larger components like for instance steer axles, engines and transmissions, OEM specification replacement components must be utilized.

The forklift dealer can guarantee that the components they have reproduced meet the OEM specifications. This will also ensure the parts meet industry standards. Lots of details go into remanufacturing second-hand parts. This attention to detail offers more serviceability out of remanufactured components than the components that were simply rebuilt.
